Pre-Lamb 2024

Key factors to consider

- Body condition score {BSC} 3 or greater is the aim
- Separate out stock with low BSC early and allocate feed to improve BSC
- Scanning rate—Twin , triplets
- Select your pre lamb treatment based on BSC, age of stock, multiple bearing
- Pasture covers
- Choose a product based on your drench status
- Discuss your options with the Eastland Veterinary Services team
- No Bionic or Centramax capsules again for 2024 season
- FEC monitoring advised if using a long acting products

Healthy Ewe Liquid RTU

A ready to use product containing key vitamins and minerals suitable for pre-tup, pre-lamb or in times of stress. Not all mineral supplements are the same. Compare the cost per dose vs mineral levels given.

Dose rate: Adult Sheep 5ml. Lambs 2.5ml

Withholding: Meat – NIL

Pack sizes: 1ltr, 5ltr, 10lr & 15ltr

Cost: From \$0.22 ex gst per ewe, \$0.11 ex gst per lamb

Available in these formulations

- Healthy Ewe RTU (Original)
- Healthy Ewe RTU High Selenium
- Healthy Ewe RTU No Selenium
- Healthy Ewe RTU plus Copper

When using it with Selenium. Do not use with any other Selenium product without consulting your veterinarian first.

**NO MIXING, NO MESS, CONVENIENT LIQUID
READY TO GO**

Drench Update/New options

With the discontinuation of many Boehringer-Ingelheim products you will now see many new brands in the clinic. After lots of research Eastland Veterinary Services is now promoting and supporting the following brands and suppliers to fill these gaps:

Active+ Duple- Double combination Oral for cattle & sheep—Replaces Switch C

Ideal for weaner/yearling cattle and adult sheep

- 1ml/10kg
- Abamectin, Levamisole
- Contains Selenium and Cobalt
- Available 5L, 10L, 20L Packs
- Meat withholding period for cattle/sheep is 14 days

Reflex F - Flukicide Pour-On for cattle—

NEW TO MARKET Replaces Genesis Ultra PO

Ideal for adult cattle, sire bulls

- 1ml/10kg
- Abamectin, Triclabendazole
- Effective against lice, Osteragia and all stages of liver fluke
- Available in 5L 2.5L packs
- Meat withholding period for cattle is 91 days

Active+ Merge- Double combination oral for cattle & sheep— Replaces Arrest C

Ideal for weaner/yearling cattle

- 1ml/10kg
- Oxfendazole, Levamisole
- Available in 10L packs
- Meat withholding period for cattle is 10 days

Turbo Minidose- Triple combination oral for sheep & cattle

New Product to Eastland Vets Range

Ideal for weaner/yearling cattle, adult sheep and lambs

- 1ml/10kg
- Eprinomectin, Levamisole, Albendazole
- Contains Selenium and cobalt
- Available in 1L, 5L and 20L packs
- Meat withholding period for Sheep is 21 days, cattle is 35 days

Eprisure microject - Eprinomectin injection for cattle—

New Product to Eastland Vets Range

Ideal for older cattle

- 1ml/100kg
- Eprinomectin
- Contains Vitamin E
- Effective on Ostertagia and type II

To Do List ✓

- Book sheep scanning.
- Book conveyor for pre-lamb treatments.
- Perform 10 day drench checks on lamb oral treatments.
- FEC ewe hgts 28 days post drench treatment to check if and when next drench is required.
- Knockout drench all lambs (trade & replacements with a Novel drench).
- BCS ewes & draft off tail ewes with intention to preferentially feed & treat.
- Book Bull Testing.
- Test winter crops for Nitrate.

CUT ABOVE THE REST...

TURBO® Pour On is formulated with advanced ingredients designed to effectively control a wide range of parasites.

When you choose TURBO® Pour On, you're not only getting the ultimate solution for parasite control you're also receiving a cutting-edge tool to enhance your work productivity. The Metabo SSE 18 LTX BL Compact Cordless Sabre Saw is a valuable tool for farm operations, offering convenience, versatility, efficiency, precision, and safety.

PURCHASE 7.5Ls OF TURBO POUR ON AND RECEIVE A METABO SSE 18 LTX BL COMPACT CORDLESS SABRE SAW*.

ALLEVA.CO.NZ | PROUDLY NZ OWNED
TURBO® is registered trademark of Alleve Animal Health Ltd. TURBO Pour On (AB11722) is registered pursuant to the PCVM Act 1997. See www.alleve.co.nz for registration conditions. *Promotional items received may differ from advertised images and available while stocks last. Offer applies to TURBO Pour On 7.5L promotion packs only.

Novel Drenches - When to use them?

Zolvix™ Plus and **Startect®** with their novel chemistry are the best choices for:

1) Quarantine Drenching.

Purchasing sheep that contain resistant worms is a sure-fire way of introducing drench resistance onto your property. This risk can be minimised by implementing an effective quarantine program for all sheep. For more risk management, a double combination drench such as Scanda® or Corporal® can also be used concurrently with the novel drench i.e.—two drenches.

2) **Knockout Drenching.** This is the substitution of one of the routine 28 day lamb drenches (e.g. double or triple combination) in late summer/early autumn;

Using a product containing a new or novel drench active such as Zolvix™ Plus or Startect® as a knockout drench will kill resistant parasites that have survived or accumulated from the preceding drenches.

3) **Primer drenching** involves using an effective drench like Zolvix™ Plus or Startect® to kill any resident adult worms including resistant worms concurrently at the same time as administering a long acting drench i.e - Exodus Long Acting Inj (LAI).

4) **Exit Drenching** involves treating sheep that have been treated with a long acting drench product. Typically this is administered towards the end of the products payout period to remove any ingested larvae that have survived and grown into egg laying adults. This can be confirmed through a FEC prior to docking in most situations. For practical reasons this treatment is best targeted at docking time.

Contact Eastland Vets today to discuss the best time to incorporate your Novel Drench Treatment.

Product information

May/June 2023

Are your cattle getting the copper they need?

COPACAPS/COPPERGAIN contain copper oxide wire particles in gelatine capsules and are the safest and most effective form of copper supplementation for cattle. After oral dosing, the capsule dissolves and releases small wire rods of oxidised copper which lodge in the folds of the abomasum. The weight of the capsule stops it being regurgitated. In the acid environment of the abomasum the rods slowly dissolve over time. Copper is absorbed, released into the blood stream and then stored in the liver.

Capsules are a very safe form of supplementation and give long term protection against copper deficiency. Elevated levels of copper in the liver can be expected for between four and eight months depending on dietary conditions and starting levels. Strategic timing of a single dose can protect your cattle for a whole year. Discuss testing and treating for copper deficiency today with one of the production animal vets.

Note: Copper Capsules are a prescription animal remedy available ONLY under veterinary authorisation.

Cattle & Sheep Liver Fluke Options

Product	Name	Active(s)	Kills early immature ? (0-8 weeks)	Kills late immature ? (8-12 weeks)	Kills Adult fluke ?	Meat WHP	Suitable use
